

BUS 101 Spring Semester 2025

Guidelines for E&M Scaffolding Assignment 1

Dear Students,

The first Scaffolding Assignment for your Final Group Project requires your team to make a short presentation of your entrepreneurial opportunity during your normal Recitation slot during Week 3 of the semester:

Time	Tuesday, 28 January 2025	Wednesday, 29 January 2025
9:00	Recitation 1	Recitation 7
10:00	Recitation 2	Recitation 8
11:00	Recitation 3	Recitation 9
13:00	Recitation 4	Recitation 10
14:00	Recitation 5	Recitation 11
15:00	Recitation 6	Recitation 12

The purpose of these guidelines is to provide you with further details about this Scaffolding Assignment.

1. Scaffolding Assignment Details

Scaffolding Assignment 1 requires your Team to prepare a short presentation of your idea for the Entrepreneurial Opportunity you have chosen to develop during the semester.

We would encourage you to think carefully about the idea you choose and aim to select an idea that has some substance to it and can be further developed as an opportunity. Future scaffold assignments and the Final Group Project submission due at the end of the semester will depend heavily on the quality of the idea that you choose, so please choose wisely!

While it is possible for a Team to pivot to a new idea later in the module if you find your original idea is not working out, this is going to put you at a disadvantage compared to other Teams as you will need to go back and re-submit any previous work that has been submitted.

2. Submission Requirements

To ensure presentations run smoothly, you are required to **submit a copy of your presentation to Moodle no later than 23:59 on Monday, 27 January 2025**. We will then download all presentation files and bring them to each Recitation.

An Assignment folder titled “E&M Scaffolding Assignment 1” will be created in E&M Week 3 of the main lecture section in Moodle for you to submit your Scaffolding Assignment.

Please use **PowerPoint** for your team’s in-person presentation.

Please also ensure that you include your Recitation number and Team number in your submission and that the name of your submitted file starts with your Recitation number and Team Number. For example, the file "R3T5 SA1" represents Scaffolding Assignment 1 for Recitation 3 Team 5. Only 1 submission is required per team.

Teams will present in Team Number order (ie Team 1 followed by Team 2 etc.) and **you have a maximum of 3 minutes to make your presentation. Presentations longer than 3 minutes may be penalized.**

How you make your presentation is up to your team. Given that you have a maximum of 3 minutes, you may decide it is not optimal for everyone in your team to present. However, since this is a team-based project, we are expecting all members of the team to contribute to the preparation of your presentation.

3. Identifying Your Entrepreneurial Opportunity

You should work as a team to generate as many ideas for your entrepreneurial opportunity as you can. You can use AI tools such as ChatGPT, Microsoft Copilot or Google Gemini and other processes such as Brainstorming or Nominal Group Technique, Mind Mapping or Six Thinking Hats to come with ideas. Then refine these ideas into a shortlist of 3-4 potential candidates for the entrepreneurial opportunity you will pursue.

Once you have a shortlist of ideas, consider which idea appears to have the most promise, taking into account factors such as:

- How innovative is the idea? Is this an idea for a completely new product or service or do similar products already exist? If similar products already exist, how is your product or service going to be different from existing ones?
- Is this going to be a “for-profit” commercial entrepreneurial opportunity or is it a social entrepreneurial venture (either is acceptable).
- How big do you think the potential market could be for the product or service you are considering? Generally speaking, the bigger the potential market, the more attractive it should be.
- Does your product or service idea have the potential to be sold in international markets?
- Does the technology exist for you to realize your idea? Are there any technology barriers that will stop you from fully developing the product or service or perhaps prevent your potential customers from adopting your product or service?

As part of your presentation we would also like you to briefly describe your team’s decision-making process during the generation, discussion and evaluation of the ideas. For instance:

- any teamwork method or technique you used to document or track the process (e.g. if your team developed a mind map, you can put it into the appendix);
- any criteria impacted on your team’s choice (e.g. United Nations 17 Sustainable Development Goals, market trends, beliefs and moral principles, etc);
- any references to real-world cases (i.e. is anyone else pursuing a similar idea and if so, how is your idea different?);
- any capabilities or skills possessed by your team that may be helpful if this project is to succeed.

4. Grading

This Scaffolding Assignment is worth 5% of your Final Grade. Submissions will be graded using the following criteria:

- the clarity and description of your entrepreneurial idea – how easy is it for a person reading your submission to understand the entrepreneurial idea you have chosen to pursue? (2%)
- the originality and innovation associated with your entrepreneurial idea - ideas that already exist or we have seen before in BUS 101 will receive a lower grade (please refer to the list of previous BUS 101 projects in the main section of Moodle). (1%)
- the clarity and description of the decision-making process your team used in arriving at your entrepreneurial idea. (1%)
- the persuasiveness and professionalism of your team's presentation. (1%)

5. Use of AI Tools

Please note that artificial intelligence (AI) tools such as ChatGPT, Microsoft Copilot, Google Gemini or Claude can be used to aid your decision-making in preparing this presentation. However, in using such tools, please be aware of the following:

- If you provide minimum-effort prompts, you will get low-quality results. You will need to refine your prompts in order to get good outcomes. This will take work.
- Do not trust anything these AI tools say. If it gives you a number or fact, you should assume it is wrong, unless you either know the answer or can check with another source. You are responsible for any errors or omissions provided by these tools.
- AI is a tool, but one that you need to acknowledge using. Submissions that use AI tools but do not disclose this, are in violation of the NU Student Code of Conduct and will receive a zero grade for plagiarism and may be reported for further disciplinary action.

6. Team Participation

To avoid the situation where some members of the team do the work and other members enjoy the benefits of this without contributing, we are asking all Teams to copy and paste the following statement into the bottom of their Scaffolding Assignment 1 submission and to provide either a Yes or No response:

We confirm that all members of our team have made a legitimate effort to contribute to this submission and agree that all members should receive the same Assessment Grade.

Please answer “Yes” or “No”:

In a situation where there is a “No” response, we will follow up with that team and where there is evidence that a member of the team has not made an effort to contribute to the Scaffolding

Assignment, it is likely they will receive zero marks for the submission.

We are giving this power to each team because you are in the best position to decide whether a team member has made an effort to contribute to the submission or not.

In making this decision, please be aware that some students may be affected by technology limitations or other problems which may make it difficult for them to always attend meetings. If they are making an effort to communicate with the team and contribute in other ways (e.g., through email or WhatsApp) that should be seen as an acceptable contribution.

However, in the situation where a student has chosen not to contribute and is instead relying on the efforts of other team members, the team needs to seriously consider whether that student should receive the same grade as other team members who have contributed to the submission.

If a team does not include this Team Participation Statement in their submission, we will assume that all members of the team have made a legitimate effort to contribute to the submission.

If any Team needs further clarification on this point, please do not hesitate to contact your Instructor.

Thank you.
