

BUS 101 Spring Semester 2025

Guidelines for E&M Scaffolding Assignment 2

Dear Students,

The second Scaffolding Assignment for your Final Group Project requires your team to make a short presentation of your entrepreneurial opportunity during your normal Recitation slot during Week 5 of the semester:

Time	Tuesday, 11 February 2025	Wednesday, 12 February 2025
9:00	Recitation 1	Recitation 7
10:00	Recitation 2	Recitation 8
11:00	Recitation 3	Recitation 9
13:00	Recitation 4	Recitation 10
14:00	Recitation 5	Recitation 11
15:00	Recitation 6	Recitation 12

The purpose of these guidelines is to provide you with further details about this Scaffolding Assignment.

1. Scaffolding Assignment 2 details

Scaffolding Assignment 2 (SA2) requires your team to make a 4-minute in-person presentation that covers the following aspects of your entrepreneurial opportunity:

- the value proposition for your idea; and
- the selected target market.

2. Submission requirements

To ensure presentations run smoothly, you are required to **submit a copy of your presentation to Moodle no later than 23:59 on Monday, 10 February 2025**. We will then download all presentation files and bring them to each Recitation.

We will download all presentation files and bring them to each Recitation.

An Assignment folder titled “E&M Scaffolding Assignment 2” will be created in E&M Week 5 of the main lecture section in Moodle for you to submit your Scaffolding Assignment.

Please use **PowerPoint** for your team’s in-person presentation.

Please also ensure that you include your Recitation number and Team number in your submission and that the name of your submitted file starts with your Recitation number and Team Number. For example, the file "R3T5 SA2" represents Scaffolding Assignment 2 for Recitation 3 Team 5.

Only 1 submission is required per team.

Teams will present in Team Number order (ie Team 1 followed by Team 2 etc.) and **you have a maximum of 4 minutes to make your presentation. Presentations longer than 4 minutes may be penalized.**

How you make your presentation is up to your team. Given that you have a maximum of 4 minutes, you may decide it is not optimal for everyone in your team to present. However, since this is a team-based project, we are expecting all members of the team to contribute to the preparation of your presentation.

3. Using material from Scaffolding Assignment 1

You are encouraged to use material from Scaffolding Assignment 1 (SA1) in SA2, wherever appropriate. Using material from SA1 in SA2 will not be treated as plagiarism.

4. Describing your entrepreneurial opportunity's value proposition and target market

In SA1, you described the Idea for your Entrepreneurial Opportunity. In SA2 you are being asked to present the value proposition for your chosen target market.

As discussed in the lecture material, in order to identify the value proposition for your entrepreneurial opportunity, you need to answer the following key questions:

- What benefits are we aiming to offer our customers that will attract them to our product or service and encourage them to purchase?
- Why will customers purchase our product or service instead of a competitor's?

At the same time as you are developing the value proposition for your entrepreneurial opportunity, you also want to be considering which group of customers you think will be interested in the benefits you are offering and that you want to sell your product or service to – i.e. your target market.

In identifying your target market, you have a number of choices open to you. You may choose to adopt an undifferentiated marketing approach, where you assume that everyone is a potential customer for your product or service. Alternatively, you may decide to narrow down the number of potential customers you are targeting by seeking to identify the customer segments that represent a closer fit with your value proposition.

You can identify these customer segments by allocating customers into groups with similar characteristics using:

- Demographic criteria (e.g., age, gender, race, education, etc)
- Psychographic criteria (e.g., personality, motivations etc)
- Geographic criteria (e.g., location, density, climate etc)
- Behavioural criteria (e.g., price sensitivity, volume usage etc)

There is no single, correct criteria for identifying market segments – it is situational. You should choose the market segmentation criteria that makes the most sense for your particular value proposition.

You can also use more than one criteria to identify market segments and you may identify more than one market segment which might be interested in your value proposition, based on different criteria.

There are two main advantages of going through the effort of identifying those customer segments that appear to represent a close match with your value proposition. Firstly, it increases the probability of sales, because you are targeting customers whose needs more closely match your value proposition and you can specifically focus on these customers. Secondly, it reduces your marketing costs, because rather than targeting a broad, undifferentiated market, you are focusing only on those customers whose needs more closely match your value proposition. The main disadvantage is that you may lose sales from potential customers who lie outside the customer segments you have chosen to target.

Also, keep in mind that you can develop different value propositions for different customer segments. For example, car manufacturers commonly develop a range of car models with different value propositions and pricing strategies.

5. Grading

This Scaffolding Assignment is worth 5% of your Final Grade. Presentations will be graded using the following criteria:

- a clear description of the value proposition for your entrepreneurial opportunity; (2%)
- a clear description of the target market for your entrepreneurial opportunity; (2%)
- the persuasiveness and professionalism of your team's presentation. (1%)

Including details of the decision-making processes and the tools that your team used, as well as any available data that supports your decisions will earn a higher grade. References to data sources should follow Nazarbayev University's normal academic standards.

As for SA1, artificial intelligence (AI) tools such as ChatGPT, Microsoft Copilot, Google Gemini or Claude can be used to aid your decision-making.

However, in using such tools, please be aware of the following:

- If you provide minimum-effort prompts, you will get low-quality results. You will need to refine your prompts in order to get good outcomes. This will take work.
- Do not trust anything these AI tools say. If it gives you a number or fact, you should assume it is wrong, unless you either know the answer or can check with another source. You are responsible for any errors or omissions provided by these tools.
- AI is a tool, but one that you need to acknowledge using. Submissions that use AI tools but do not disclose this, are in violation of the NU Student Code of Conduct and will receive a zero grade for plagiarism and may be reported for further disciplinary action.

6. Team participation

To avoid the situation where some members of the team do the work and other members enjoy the benefits of this without contributing, we are asking all teams to copy and paste the following statement to the final page of their PowerPoint presentation and to provide either a Yes or No response:

We confirm that all members of our team have made a legitimate effort to contribute to this submission and agree that all members should receive the same Assessment Grade.

Please answer “Yes” or “No”:

In a situation where there is a “No” response, we will follow up with that team and where there is evidence that a member of the team has not made an effort to contribute to the Scaffolding Assignment, it is likely they will receive zero marks for the submission.

We are giving this power to each team because you are in the best position to decide whether a team member has made an effort to contribute to the submission or not.

In making this decision, please be aware that some students may be affected by technology limitations or other problems that may make it difficult for them to always attend online or in-person meetings. If they are making an effort to communicate with the team and contribute in other ways (e.g. through email or WhatsApp) that should be seen as an acceptable contribution.

However, in the situation where a student has chosen not to contribute, and is instead relying on the efforts of other team members, the team needs to seriously consider whether that student should receive the same grade as other team members who have contributed to the submission.

If a team does not include this Team Participation Statement in their submission, we will assume that all members of the team have made a legitimate effort to contribute to the submission.

If any Team needs further clarification on this point, please do not hesitate to contact your Instructor.

Thank you.
